

# Electricity contract

Tekniska verken owns electricity networks in Linköping and Katrineholm. The contract with the electricity network operator is not optional – you must have one. You also need an electricity supply agreement. When you enter into an agreement with us, you are automatically allocated to our electricity supply company Bixia. The advantage of having an agreement with Bixia is that they offer all private customers 100 percent renewable electricity from solar, wind and water. You also only have one number to call if you have any questions about the agreement.

When setting up an electricity supply agreement, you need to choose which price model you prefer. Otherwise, you will be charged a higher price for your electricity (under what is known as a “designated contract”).

## Agreements:

### Fixed price, 1–5 years

This means you pay the same price per kilowatt hour (kWh) throughout the binding period. The sum on your invoice each month may still change, however, as your consumption of electricity will inevitably vary.

### Variable price

This means that the price changes during the year. Electricity is usually more expensive in winter than in summer.

If you want to keep your costs as stable as possible, it is better to choose a fixed price agreement. You can choose to pay a fixed price for 1, 2, 3 or 5 years.

Electricity network = access to electricity at your residence (all the way to your door).

Electricity supply = the volume of electricity you use in your residence.

We at Tekniska verken and Bixia help you set up a favourable electricity supply agreement.
